Who We Are

We are a software solutions and consulting services provider based in Bangalore, India. We partner with businesses to address all their IT requirements: application development, integration, maintenance and quality initiatives for evolving needs, both at the local and global level.

Our Mission

To be recognized as one of the most innovative enterprises in the IT business. We will offer our customers high quality and cost-effective services within geographies and market segments that can benefit from our diverse talent base and process-centric solution delivery.

Our Values

- Knowledge and awareness building
- Leadership through thoughts and action
- Openness and transparency in our dealings
- Commitment to customers and results

What we bring to the table

Collectively, we are one agile mind that adapts quickly to evolving needs. This we achieve through continuous training to keep us in line with emerging cutting-edge technologies.

We are dedicated to addressing business needs by providing meaningful solutions that carry the assurance of our process rigor. This paves the way for strategic alliances which, in turn, foster a lively business eco-system that leads to a wide and deep skill base: all for developing vibrant partnerships with our clients who benefit professionally (through our strong work ethic) and financially (through our low operational overheads).

Our Services

KLoc brings experience, best practices and tools to offer a wide range of solutions within 4 key areas of focus:

- IT Services
- IT Consulting Services
- Knowledge Services
- QA/Testing Services

IT Services

Maximum ROI

To ensure maximum flexibility, speed and efficiency, businesses need an IT partner who can leverage domain expertise and technical ability to adapt to changing conditions. KLoc is that partner who will help reduce time-to-market and control spiralling costs by delivering assured quality services. In short, KLoc will maximize your return on investment.

Services: Application Development, Integration, Testing and Maintenance, Data Analytics and Data Migration
Technologies: Web and emerging technologies like RIA, OpenSource, Microsoft ERP and Java

IT Consulting Services

Exceeding expectations

KLoc's IT consultants are all highly skilled professionals with sound academic and professional credentials. They partner with our customers' teams or work independently to provide solutions that not only meet but exceed expectations.

Simple factors that make a big difference

- Stringent hiring/screening process
- Continuous training
- Process compliance
- Total customer satisfaction policy

Knowledge Services

Intelligent information

Organizations have begun to realize the value in mining and demystifying the huge volumes of data and information that are available to them. To do so, they need this information in a form that is usable, precise and timely. Only then will the intelligence retrieved help direct business strategy.

KLoc's knowledge management skills include:

- Data Services: data organization, profiling and enriching
- Business Intelligence: statistical reports and dashboards

QA/Testing Services

Guaranteed quality

KLoc provides manual and automated testing services including but not limited to:

- Product Testing
- System Testing
- Performance Testing
- Integration Testing
- Stress Testing
- Application Testing

Our team is trained in the latest test automation tools and techniques. They can visualize, strategize and execute test scenarios depending on the requirement.

Case Study

Managing highly complex
 multi-lingual web content

The Challenge

The client, a world leader in visual computing technologies, needed end-to-end support for their worldwide web content. The task was challenging on several counts. For one, the content comprised silos of multi-lingual data and information spread across 36 countries. For another, tools and software used by customers, partners and other stakeholders across the globe needed to have on-time upload capability - this had serious customer satisfaction impact. The client had set stringent SLAs for itself, the fulfillment of which was dependent on our output. Finally, as was only to be expected, all this had to be achieved with a limited budget.

The Solution

At KLoc we set up a highly skilled, multi-faceted technical team to manage the diverse requirements of this project. The team profiled, mined and managed data and provided support to the client's various business units across the world. Using cutting edge technologies like RIA, the team also designed and developed the required web pages. This also included special projects like the creation of storefronts and executive dashboards to make it easier for the various stakeholders to access and use the content.

The Impact

The project was a huge success. The client was able to meet the SLAs it had set for itself leading to high end-customer satisfaction. The storefront enabled them to sell branded gear, thereby adding to their revenue stream. Through the dashboard, their senior management was able to obtain important real-time sales data and gain invaluable insights into customer behaviour. All of which is reflected in the enduring relationship of over three years that we now enjoy with them.
